New Solution Center Provides High-level Technology Solutions in the Gulf Coast Area

May 2009 - Wunderlich – Malec Engineering announces a major expansion to better serve its customers in the Hydrocarbon Processing Industry and Gulf Coast area by opening a business-oriented advanced technology solution center located in the Houston, Texas area. The focus of the operation is to deliver business process re-engineering, advanced technology deployment, and automation migration solutions engineered to allow customers to maximize assets and technology and mitigate risk. Dave Smith, a recognized technology manager in control systems, networks and communications has joined Wunderlich – Malec to manage this operation which is expected to open this summer.

A leading process automation, engineering and system integrator in the US industrial market, Wunderlich – Malec Engineering was established in 1981 and now has 15 branch offices and engineering solution centers that serve its customers throughout the United States.

The new Houston solution center will provide industry-oriented business process engineering and technology migration solutions focused on the oil and gas industries - designed to help users lower cost, maximize assets, profit from technology and mitigate risk.

Areas of focus for upstream and downstream include:

- Domain and subject matter expertise
- Business process re-engineering and technology deployment
- Automation migration
- Advanced business technologies including wireless
- Solutions oriented economics management
- Abnormal situation management & strategies
- Reliability condition-based maintenance
- Risk management and mitigation

“This expansion is driven by demand in the Houston area for engineering and strategic business alliances.” says Neal Wunderlich, president Wunderlich - Malec Engineering. “We are very excited to have an experienced individual like Dave Smith join our team. Dave brings 30-plus years of experience in the areas of digital networking and process control.”
